

"Improved health through quality health information"

CEO Stephen Clark on Digital Health Week

NLCHI is leading the future of digital health in Newfoundland and Labrador. Through our vision we are enabling the health system to evolve and grow in the face of ever changing technological and innovative opportunities. We are facilitating the shift from paper to digital in physician offices, providing secure access to health information to assist with care, connecting patients and providers virtually, implementing electronic prescribing between a physician's office and a pharmacy and developing a robust and national leading health data platform that will provide a real-time provincial snapshot of our health system.

Join with us as we celebrate **Digital Health Week from Nov 11-17.**

2019 Women Leaders in Digital Health

Congratulations to NLCHI's very own Dr. Kayla Collins who has been selected as one of ten **Women Leaders in Digital Health 2019** by Digital Health Canada.

Kayla is the Director of Information Management and Business Intelligence. Through a broad range of knowledge and experience including health analytics and secondary use of health data, applied health research, epidemiology, evaluation, data provisioning and data lifecycle management, she is helping position NLCHI as a provincial and national leader in eHealth.

Modern Consent Design Jam

On Nov 6, NLCHI co-hosted the Modern Consent Design Jam in St. John's. A sprint-like event, the goal was to develop a modern real-time consent model to support patient access. The event was made possible by the Office of the Privacy Commissioner of Canada Contributions Program. Partnering with NLCHI was Infoway Canada, Memorial University, Hacking Health St. John's, Eastern Health and the Government of Newfoundland and Labrador. On Nov 7, NLCHI took part in a Consent Management Workshop, where Carole Piovesan, INQ Data Law, highlighted Canada's Digital Charter and the expected impacts to health innovation and digital health. Click to learn about the **Digital Health Charter.**

Prescription Monitoring Program - NL

NLCHI is the administrative lead for Prescription Monitoring Program - NL. Prescription monitoring programs can help improve drug prescribing, lower or prevent risks related to certain drugs, and can help identify patients who may be at risk of addiction.

Information generated from PMPNL is shared back to clinicians to help promote appropriate prescribing and dispensing practices and to provide education. Between July 2018 and June 2019, during the program's first year, there was an average of 4,602 fewer opioid prescriptions dispensed per month, compared to the previous year.

For more information on the Prescription Monitoring Program - NL visit www.pmpnl.ca

Flu Shot Clinics - Provincial Interactive Map

To find a Flu Shot clinic in your area, view NLCHI's interactive map that shows the times and locations of all public influenza clinics across the province. **Click here to view the map.**
